

The difference between DIN 975 and DIN 976

in identifying threaded rods with metric threads

As DIN standard 975 is not valid any more and was replaced by DIN 976, we at company Valenta ZT declare that we've been using DIN 976 in all written documents since January 2015.

The change of marking has no impact on the quality of goods we supply.

From time to time you may still find the old standard mentioned in older specifications such as drawings, requests or orders.

Standards used:

DIN 976-1:2002

ČSN EN ISO 898-1:2014

ČSN EN ISO 3506-1:2010

In Všetaty, January 26th, 2015
